

Reproducibility plan for <paper title>

Reproducibility levels: as per <https://cgranell.github.io/orr/materials/02-assessment.html>

U – undocumented; **D** – documented (i.e. recreatable); **A** – documented and available; **O** – documented, available & open (long term, with DOI)

Data

Dataset (add more rows as needed)	Current reproducibility level and reasoning why	Planned measures for improvement and target reproducibility level
<i>E.g., OpenStreetMap Nederland from Geofabrik as base data</i>	A because it is publicly available with a clear license and URL	None planned, because A is considered sufficient

Methods, Analysis, Processing

Method (add more rows as needed)	Current reproducibility level and reasoning why	Planned measures for improvement and target reproducibility level
<i>E.g., K-means clustering for earthquake epicenters</i>	U because parameters (e.g. K) and software environment not yet defined	Publish Python code for analysis on Github, target level A (no DOI, but open source, publicly available)

Results

Results (add more rows as needed)	Current reproducibility level and reasoning why	Planned measures for improvement and target reproducibility level
<i>E.g., choropleth maps showing priority areas for intervention</i>	U because nothing is yet defined	Publish interactive web map including underlying data set, target level A (no DOI, but users can investigate outcomes fully, publicly available)

Computational environment	Yes/no	Planned measures for improvement
